

QBox Version 2.2 Firmware Release notes

2.21.6 - Released 6th May 2016

Fixed Ethernet hot plugging.

Added a new HD display profile: HD 1080i/60.

Real Time Clock – Added an option to switch between 12H and 24H formats.

2.21.5 - Released 25th January 2016

Added HD-SDI display profiles. Specifically 720p/25 and 1080p/50

2.21.4 - Released 18th November 2015

Fixed an issue with the multibutton controller connected to the QBox. After the first button press, the QBox would not 'listen' for button presses until about 1 second later. Thus you could not press the buttons very quickly. This has been resolved. Now you can push the buttons in rapid sequence.

2.21.2 - Released 14th October 2015

LAN0 and LAN1 configuration should now always match the physical ports. In the past this wasn't the case.

2.21.1 - Released 18th November 2015

Included Support for the new Blackmagic Intensity Pro 4K in QBox. Please note this firmware will update the Blackmagic firmware on the card if it's not up to date.

2.20.12 – Released 30th March 2015

Added ability to adjust width of Cue Marker

2.20.11 - Released 18th February 2015 - 48-13634

Improved (increase) maximum speed values for all controllers. Fixed an issue where the speed setting for the multibutton controller were limited. This firmware contains improved (increased) maximum speed value for the PAL and NTSC profiles.

2.20.10 – Released 30th January 2015 - 41-13611

Fixed an issue where you could not power down the QBox by pushing the power button.

2.20.09 – Released 10th December 2014 - 48-13583

Fixed Daemon Time Sync, Improved Display Setting Profiles, Improved Scroll Device Types (under hardware ports)
