Software Release Details:

Functionality Added		
Internal Ref Number and Description	What part of the system will this change affect?	What changes have we made?
	QStart Mac	Support for OSX Mavericks 10.9.X. Note that this is now the minimum OSX version supported. Users with OSX versions lower than 10.9.X will need to upgrade in order to run QStart Mac.
	QStart Mac	Simplified registration. Now when entering the 25 digit product key, you can enter the dashes or not enter the dashes. Either is acceptable.

Autocue Software Release Notes

Bugs Fixed		
Internal Ref Number and Description	What part of the system will this change affect?	What changes have we made?
74-11958	QStart Mac	QStart Mac would not save your preferences. For example, if you set the preferences to use the keyboard and not mouse, then restarted QStart, the settings would go back to the defaults. This has been resolved.
74-12224	QStart Mac	In older versions of QStart Mac, there was a View menu with 'show toolbar' and 'customize toolbar'. Both options are inactive. The View menu has been removed. This has been resolved.
48-13169	QStart Mac	The Cue Marker would face the wrong direction when positioned on the right side (for right-to-left languages). This has been resolved.
48-13169	QStart Mac	In newer versions of OS X, the Prompt Preview monitor window would not come up after you started prompting a 2 nd time. Also, the Prompt Preview monitor window would come up on the wrong destination window. This has been resolved.
48-13169	QStart Mac	QStart Mac would not save any formatting of the text (bold, underline, colors etc.). This has been resolved.
48-13169	QStart Mac	In the Prompt mode, the mouse cursor is moving in the Edit window during scroll speed control – this affects any icons and options on the laptop screen. This has been resolved.
48-13169	QStart Mac	In the Prompt mode, two finger scroll on the touchpad, allows to move text in the Edit window and affect speed on the Prompt monitor. This has been resolved.
48-13169	QStart Mac	Contour Shuttle configuration settings file for QStart Mac has been updated to work with the new version 3 Contour Shuttle driver. The new driver is required for newer OS X 10.9.1 Mavericks.
48-13169	QStart Mac	The scroll speed with the Shuttle is very slow. This has been resolved. The scroll is now faster.
48-13169	QStart Mac	Contour Shuttle Xpress buttons not working. This has been resolved. The buttons are now configured from left to right: Previous Marker, Next marker, Reverse Scroll Direction, Cruise Control, Reset to top.
48-13169	QStart Mac	With newer versions of OS X, the teleprompt window would not display as full screen. This has been resolved.
	QStart Mac	When running QStart Mac as evaluation, "Get a license" button would not work. Now the button launches the browser and brings you to the Autocue QStart Mac page.
	QStart Mac	When running QStart Mac as evaluation, you could prompt for 2 minutes instead of the designated 20 seconds. This has been resolved.
	QStart Mac	The evaluation version of QStart Mac would crash with newer versions of OS X. This has been resolved.

Software Release Upgrade Process:

You will need to contact Autocue on UK +44 (0) 208 665 2992 or US +1 (212) 929 7755 or email SoftwareSupport@autocue.com to obtain a link to the latest version of the software and the password to unlock the zip file.
